PROJECTS

SIGNED: Sign Language Tutorial

- An interactive sign language learning platform built with Python and Django, complete with gesture recognition.
- Implemented and compared Random Forest and SVM; achieved superior gesture recognition accuracy with SVM.

ARGUEL: Summarizer

- A tool powered by a pre – trained BERT model that summarizes long and complex content.
- Python, Django, and NLP techniques were utilized to build the summarization tool.

FIFO Inventory System

- An inventory system with FIFO logic, rollback support, and modules for sales and analytics.
- Created secure, role-based access using PHP, JavaScript, and Bootstrap for a responsive interface.
